

White Paper Highlights

They say privacy is a thing of the past.
We say it's the future.

- Envelope is a virtual envelope in which you can lock emails, digital files, or secure messages containing text, images, audio, video - anything that can be sent online.
- Unprecedented privacy and control over the content, including who views it, when and where.
- Only the intended recipient can open an Envelope, and only after accepting the sender's terms and conditions.
- If you ever suspect a breach, you can entirely vaporize your content at will, regardless of how many times it has been shared or forwarded.
- You have the ability to fully restore vaporized content should you see fit.
- The sender of an Envelope is in total control of their information from end-to-end.
- Envelope is a fully working Government Approved product.

How do you maintain complete control over the files you send?
The answer is the same as it's always been.
It's also something you've never seen before.

Upon delivery, receipt, opening, viewing, and interaction with the content within a Virtual Envelope, an unalterable evidence trail is recorded onto the Ethereum blockchain.

What goes in an Envelope? **Everything.**

Any form of digital content – music, movies, business proposals, document bundles and multimedia elements can be sent via Envelope.

Where we're going, there's no competition.

Envelope can be compared to four major industry sectors: secure messaging, secure email, digital signature, and data rooms. The plan is to consolidate these sectors into one new product with added features.

Potential Global Market

- B2B - finance, insurance, legal, government, telecom, healthcare, marketing, entertainment
- B2C - potentially 100+ million audience in telecom, entertainment

Envelope Meets or Exceeds Privacy and Security Standards

- U.K. Government-Approved Crown Supplier with military-grade encryption in transit and at rest, continually tracking, controlling and securing every user's content.
- G-cloud approved
- GDPR-compliant storage
- HIPAA-compliant
- The Envelope Token Sale: The LOCK and Key of the Future

Envelope will be enhancing their existing, market-ready product by leveraging blockchain technology. Envelope will create its own token (LOCK) that will be accepted in exchange for Envelope's services. Funds will be raised via a token sale. Funds raised will go towards programming the blockchain integrations, additional developments and business expansion.
